

FibreRISE

Product Description

FibreGrid FibreRISE allows for installation of GRP Grating Risers in to a most building.

Whether it be new build or refurbishment of an existing building we have a GRP Riser system to meet your requirement.

The construction of FibreRISE allows for easy fabrication either at our factory before delivery or on site prior to installation. No hot work is required when fabricating on site, just standard cutting tools.

FibreRISE can either be cast into concrete or retro fitted to riser voids at a later date

Additional supports can be provided if required using FibreGRID GRP Pultruded Profiles such as angles, channels and beams.

System Benefits

- Lightweight allowing for ease of handling and installation
- High Weight to strength ratio
- Can be site cut with no hot work required
- Bi-directional spanning
- Excellent load bearing capabilities
- Excellent gritted anti slip surface
- Fire Resistant
- No special cutting equipment required for on-site fabrication

Depths Available

38mm, 50mm

Colours Available

- Green (RAL 6010)
- Light Grey (RAL 7047)
- Yellow (RAL 1003)
